SUMMARY

Software Engineer with nearly 2 years of experience designing and developing scalable backend applications using **Java, Spring Boot, Microservices, Apache Kafka, PostgreSQL, Redis, Docker, and Jenkins**. Experienced in building **distributed systems, RESTful APIs, event-driven architectures, CI/CD pipelines, and performance optimization** for enterprise cybersecurity platforms.

EXPERIENCE

CyberEvolve	Delhi
Software Engineer	Apr 2024 - Present
- Designed, developed, and maintained scalable backend services for Socleus, an enterprise cybersecurity and monitoring platform, using Java 8+, Spring Boot, Spring Security, and Microservices Architecture. - Engineered and enhanced Telemetry, Audit, Dashboard, Analytics, Rule Management, and Log Collection modules, enabling real-time monitoring and security visibility across 50+ monitored devices and services. - Built and maintained 20+ RESTful APIs and backend services, contributing to API design, Low-Level Design (LLD), business logic implementation, and cross-service integration. - Strengthened platform security by implementing JWT Authentication and Role-Based Access Control (RBAC), securing 20+ REST APIs and enforcing controlled access across multiple microservices. - Architected high-throughput data ingestion pipelines using Apache Kafka, multithreading, and asynchronous processing, supporting reliable ingestion and processing of 10,000+ telemetry and log events per minute. - Improved reporting and data retrieval performance by 35% through query optimization, indexing strategies, and efficient use of PostgreSQL, MySQL, Spring Data JPA, and Hibernate. - Managed end-to-end deployment, production releases, and operational support for 15+ microservices using Docker, Jenkins, Linux, Nginx, and CI/CD pipelines, ensuring high availability and reliable application delivery.	

SKILLS SUMMARY

Languages: Java (8/17/21), SQL, Bash
Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate
Distributed Systems: Microservices, Apache Kafka, Spring Cloud, Eureka, OpenFeign, Event-Driven Architecture
Databases: PostgreSQL, MySQL, Redis, TimescaleDB
DevOps: Docker, Docker Compose, Kubernetes, Jenkins, Git, Maven, Liquibase, Flyway
Security: Keycloak, JWT, OAuth 2.0, RBAC
Architecture: REST APIs, System Design (HLD/LLD), SOLID Principles, Design Patterns
Testing & Monitoring: JUnit 5, Mockito, Grafana
Cloud: Linux, AWS, Nginx, Yotta Cloud Server

EDUCATION

Kanpur Institute of Technology - KIT	Kanpur, Uttar Pradesh
Master of Computer Application - MCA; GPA: 7.8	Aug 2022 - Jun 2024
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases	

PROJECTS

Distributed Device Health & Telemetry Monitoring Platform	Jun 2026
- Designed and developed a production-grade Device Health & Telemetry Monitoring Platform using Java 21, Spring Boot, and Microservices Architecture. - Built a cross-platform Monitoring Agent using OSHI to collect real-time CPU, Memory, Disk, Network, and Process metrics from 10+ distributed endpoints. - Established a secure microservices ecosystem using Spring Cloud, Eureka, OpenFeign, API Gateway, Distributed Tracing, and Spring Security, enabling reliable communication across 10+ interconnected services. - Increased telemetry processing efficiency by 40% through Redis caching, optimized PostgreSQL schema design, and asynchronous event-driven workflows, supporting high-volume metric ingestion. - Automated deployment, configuration, and environment provisioning using Docker, Docker Compose, Linux, and Shell Scripting, reducing deployment effort by 50% while improving release consistency.
