

# Migration Checklist + Yotta Server Setup (Selfcare Laravel + Tellyon WordPress)

## Objective

Current server se sirf dependencies aur required details check karna, phir new Yotta server pe migration setup karna.

---

## Part 1: Current Server Pe Kya Check Karna Hai

### Selfcare Site (Laravel)

#### PHP Version

```
php -v
```

Why: Same PHP version new server pe install karna.

#### Laravel Version

```
cd ~/htdocs/selfcare.tellyon.com  
php artisan --version
```

Why: Framework compatibility check.

#### PHP Modules

```
php -m
```

Why: Same modules new server pe install karne.

#### Composer Version

```
composer --version
```

Why: Dependency management.

## Scheduler / Artisan Jobs

```
ps -ef | grep artisan  
crontab -l
```

Why: Scheduled jobs identify karne.

## Environment File

```
cat .env
```

Check:

- DB settings
- APP\_URL
- Mail config
- Redis / Queue config

## Permissions

```
ls -ld storage bootstrap/cache
```

Why: Writable folders identify karne.

---

## Tellyon Site (WordPress)

### Site Path

```
cd ~/htdocs/tellyon.com  
pwd
```

### WordPress Config

```
cat wp-config.php
```

Check:

- DB\_NAME
- DB\_USER
- DB\_PASSWORD

- DB\_HOST

## Plugins / Themes

```
ls wp-content/plugins
ls wp-content/themes
```

Why: Dependency check.

---

## Server Level

### Nginx Version

```
nginx -v
```

### MySQL Version

```
mysql --version
```

### Ports

```
ss -tulnp
```

---

## Part 2: New Yotta Server Setup + Migration Steps

### Step 1: Update Server

```
sudo apt update && sudo apt upgrade -y
```

### Step 2: Install Nginx

```
sudo apt install nginx -y
sudo systemctl enable nginx
sudo systemctl start nginx
```

### Step 3: Install PHP 8.0 + Modules

```
sudo add-apt-repository ppa:ondrej/php -y
sudo apt update
sudo apt install php8.0 php8.0-fpm php8.0-cli php8.0-mysql php8.0-curl php8.0-
mbstring php8.0-xml php8.0-zip php8.0-bcmath php8.0-gd php8.0-intl php8.0-
imagick php8.0-redis php8.0-memcached -y
```

### Step 4: Install Composer

```
cd /tmp
curl -sS https://getcomposer.org/installer | php
sudo mv composer.phar /usr/local/bin/composer
```

### Step 5: Install MySQL

```
sudo apt install mysql-server -y
sudo systemctl enable mysql
sudo systemctl start mysql
```

### Step 6: Create Web Folders

```
sudo mkdir -p /var/www/selfcare
sudo mkdir -p /var/www/tellyon
```

### Step 7: Put Files in Folders

- Laravel files -> /var/www/selfcare
- WordPress files -> /var/www/tellyon

---

### Step 8: Laravel Setup

```
cd /var/www/selfcare
composer install --no-dev --optimize-autoloader
cp .env.example .env
nano .env
php artisan key:generate
php artisan config:cache
```

```
php artisan route:cache  
php artisan storage:link
```

## Step 9: WordPress Setup

```
nano /var/www/tellyon/wp-config.php
```

Update DB credentials.

---

## Step 10: Permissions

```
sudo chown -R www-data:www-data /var/www  
sudo chmod -R 775 /var/www/selfcare/storage  
sudo chmod -R 775 /var/www/selfcare/bootstrap/cache
```

---

## Step 11: Nginx Config

### Laravel Root

```
/var/www/selfcare/public
```

### WordPress Root

```
/var/www/tellyon
```

Enable configs:

```
sudo nginx -t  
sudo systemctl reload nginx
```

---

## Step 12: Laravel Scheduler

```
crontab -e
```

Add:

```
* * * * * cd /var/www/selfcare && php artisan schedule:run >> /dev/null 2>&1
```

---

## Step 13: SSL

```
sudo apt install certbot python3-certbot-nginx -y  
sudo certbot --nginx
```

---

## Final Validation

### Laravel

```
php artisan migrate:status
```

### Nginx

```
sudo systemctl status nginx
```

### PHP

```
php -v  
php -m
```

---

## Most Useful Current Server Commands

```
php -v  
php -m  
mysql --version  
nginx -v  
composer --version  
ps -ef | grep artisan  
cat .env  
cat wp-config.php
```
